

Central Manager™

Enterprise-wide remote appliance management

DATASHEET

Features & Benefits

- » *Centralized web-based management console*
- » *Allows administration of alarms, software upgrades, user/group access control, appliance health monitoring and more*
- » *Configuration of remote NIKSUN appliances*
- » *Easy integration with LDAP, RADIUS, Active Directory and TACACS+*
- » *Plug-and-play model with minimal training*

NIKSUN's Central Manager, a part of NetOmni™ Alpine, is a single-point management console that interfaces with NIKSUN® network monitoring appliances across the enterprise network so remote deployment, event management and configuration is simple, streamlined and audited. Software upgrades, backups/restorations, log records, user access control/grouping, appliance status and health monitoring, etc. are all possible in a remote and secure manner.

With Role-based Access Control (RBAC) functionality built into Central Manager, access to NIKSUN appliances can be configured and managed according to the internal compliance and governance initiatives of the organization from one central location.

Integration with common authentication sources, such as LDAP, RADIUS, Active Directory and TACACS+, make Central Manager easy to implement.

Central Manager, an integral part of NIKSUN's NetOmni Alpine Suite, seamlessly interoperates with NetOmni Dashboard (enterprise-wide service delivery management portal), NetX™ (enterprise data aggregation and reporting), and NetTrident™ (enterprise-wide forensic analysis), creating a powerful enterprise solution.

Technical Information

Package Availability: Central Manager is available as part of the following three packages, depending on specific needs - NetOmni Alpine Full Suite (NetOmni Dashboard, NetTrident™, NetX™, Central Manager), NetOmni Alpine Analytics (NetOmni Dashboard, NetTrident, Central Manager), NetOmni Alpine Reporting (NetX and Central Manager).

Integration: Authentication - TACACS+, RADIUS, LDAP and Active Directory.
